3

Zombie is a Python driver for Zombie.js (<http://zombie.labnotes.org/>), a headless browser powered by node.js (<http://nodejs.org/>):

```
from zombie import Browser
browser = Browser()

# Fill email and password, then submit form
browser.visit("http://localhost:8080/").fill(
    "email",
    "zombie@underworld.dead"
).fill(
    "password",
    "eat-the-living"
).pressButton(
    "Sign Me Up!"
)

assert browser.success
assert browser.text("title") == "Welcome to Brains Depot"
```

As much as possible, the methods of `zombie.browser.Browser` are analogous to the methods of `Zombie.js`' `Browser` class (<http://zombie.labnotes.org/API>).
